National Agricultural Statistics Service

Montana Department of Agriculture
Agricultural Statistics Unit

ATTENTION:

Enclosed is a copy of the 1988 "Montana Agricultural Statistics". This annual publication includes County and State statistics for most agricultural commodities produced in Montana. Previous issues of this publication have been used widely by the agricultural community in Montana and the Nation.

This is the only source of County agricultural statistics.

Special thanks to Montana Department of Agriculture and its Director, Keith Kelly for providing funds for preparation and printing of this bulletin.

Sincerely,

If you receive more than one copy, please give the extra to an interested friend.

Lyle H. Pratt
State Statistician

TED SCHWINDEN
GOVERNOR

As the largest industry in Montana, agriculture is the linchpin of the state's economy. A shift in the economy of the agricultural sector is quickly reflected in our state's overall economy.

While improved crop yields and livestock prices in 1987 brought a measure of economic improvement to the agricultural sector, the current drought resulted in significantly decreased production in 1988 for both grains and livestock. However, lower production resulted in substantial price improvement -- reminding us of the sometimes ironic impact Mother Nature can have on our farmers and ranchers.

As the business of agriculture becomes increasingly competitive, the need for accurate and timely information becomes crucial. The agricultural statistics presented within this bulletin provide essential information for making informed decisions. I am certain that this publication will prove useful when making the decisions that will ultimately determine the success of an agricultural business.

Sincerely,

A handwritten signature in cursive script that reads "Ted Schwinden".

MESSAGE FROM THE DIRECTOR

The 1987 statistics presented in this bulletin set the stage for 1988, a farm income year that "could have been". Instead, 1988 will be recorded in history as a drought on a national scale unequalled since the 1930's. Although not available to be reflected in this year's bulletin - the 1988 statistics will certainly prove this statement to be correct.

The drought of 1988 will be reflected in next year's statistics in reduced crop yields, herd reductions and increased livestock input costs. However, the drought relief measures approved by Congress and higher commodity prices will help mitigate the adverse effect of the drought on producers. The concern shifts to the impacts that dry soils and reduced livestock inventories will have on future production years.

The dynamic nature of the agricultural business environment challenges Montana's producers to make quality decisions. Quality decisions are a product of concise and reliable information. Although nothing can assist the decision making process like a timely two inch rain, I am hopeful that the agricultural statistics provided in this document will assist you as we position a Montana Agriculture for the 1989 season.

Sincerely,

Keith Kelly
Keith Kelly
Director

MONTANA DEPARTMENT OF AGRICULTURE

Prior to a major reorganization in 1977 the Department of Agriculture functioned mainly as a regulatory agency. Restructuring enabled the department to perform its regulatory responsibilities more efficiently and to enhance its duties to promote and encourage agriculture in Montana. The reorganization plan called for the Department to enter the 80's with a posture of progressively serving Montana agriculture.

The Department Director is responsible for administration of the department's \$5.1 million annual budget and its 79 full-time and 10 seasonal employees. He oversees the department's four divisions and two units. The function of each division and unit is summarized below.

The Centralized Services Division performs technical, fiscal, and administrative support functions for the department. Responsibilities of the division include activities for internal operations of the department.

The Environmental Management Division is responsible for the registration of 4,700 pesticide products; the certification and licensing of 1,257 commercial and government applicators, 878 operators, 544 pesticide dealers, and 7,538 private applicators. The division is also responsible for enforcement of the pesticide act and rules; providing technical environmental services to agriculture; providing an evaluation of pest management problems and programs; and providing analytical laboratory and consultative services to other agencies and the public.

The Plant Industry Division is responsible for the administration and enforcement of regulatory laws controlling the production, manufacturing, and marketing of agricultural commodities exported from or distributed within Montana. The division investigates consumer complaints; performs technical inspections and surveys; issues federal-state grade certificates; and provides regulatory technical expertise and licenses for 5,200 bee yards, 550 nurseries, 650 feed dealers, 350 fertilizer dealers, 300 seed dealers, and 325 grain merchandisers. The division also registers some 3,300 commercial feed products and 1,000 fertilizers. The division's grain laboratory in Great Falls provides the only official grain grading services in the state.

The Agricultural Development Division is responsible for administering programs directed at promoting and enhancing Montana agriculture. The Agriculture Finance program is responsible for making grants and lower interest-rate loans available to rural youth, rural youth organizations, and other qualified farmers and ranchers. The division's Agricultural Assistance program is responsible for providing peer counseling, financial consulting, and debt mediation assistance.

The Weed Control program is responsible for administering statewide efforts aimed at control and/or eradication of noxious and other weeds. The State Hail Insurance program, under the guidelines and policies developed by the State Board of Hail Insurance, insures any type of crop growing in Montana from losses caused by hail damage.

The Marketing program is responsible for identifying major needs and priorities by coordinating agricultural product development through improvement of direct markets from the producer to the consumer. The division, through the Alfalfa Seed Act, is responsible for market development for alfalfa seed growing in Montana.

Statewide agricultural statistics and projections are developed through a Federal/State cooperative agreement administered through the division, which are made available through a comprehensive agricultural statistics bulletin and grain movement summary along with other production, price, and income reports.

The Wheat and Barley program is responsible for promoting and encouraging intensive scientific and practical research in all phases of wheat culture, production, and marketing under the guidelines and policies developed by the Montana Wheat and Barley Committee. Producer assessment dollars are used to contract for work in areas such as barley improvement, disease control, insect control, cropping practices, and for foreign market promotion.

FOREWORD

This year marks the 125th anniversary of Agricultural Statistics. Abraham Lincoln called agriculture the "largest interest" of the nation in 1862 when he asked Congress to establish the Department of Agriculture. One year later, in July 1863, the first Crop Report rolled off the presses.

Montana, at that time, was a territory and had little agricultural importance. In fact, 1863 was only 58 years after Lewis and Clark made their historic exploration journey up the Missouri River and was also the year they discovered gold in Alder Gulch near Virginia City.

The first agricultural statistics collected for Montana was the cattle count made in 1867 when the Montana herd numbered 67,000 head. The first estimates of Montana wheat production were published in 1873 when only 11,000 acres were harvested. The yield was 20 bushels per acre and the crop sold for 98 cents per bushel. In contrast, during 1987, sales from Montana's 23,300 farms and ranches contributed over 1.7 billion dollars to Montana's economy.

This publication provides a comprehensive historic record of state and county agricultural data for Montana. It's part of the State-Federal service provided to data users through a cooperative agreement established in 1945 with the Montana Department of Agriculture.

We appreciate the outstanding public service provided by Montana farmers, ranchers and agri-businessmen who voluntarily cooperate by answering survey questionnaires. Thanks also to our dedicated staff of statisticians, support personnel, and field and phone interviewers who collect and summarize this information. We especially appreciate the dedication and hard work by Wendy Bruski who had overall responsibility for layout, design and computer processing.

Lyle H. Pratt
State Statistician

January: A warm and dry month with no snowcover on winter wheat. Winds caused considerable soil blowing. Most areas had less than half of normal precipitation, while the north central, central, and northeast had less than one-third.

February: Mild and dry conditions continued until the last week. Winter wheat had broken dormancy and was greening. Fieldwork got started in some areas, an unusual occurrence. Calving and lambing conditions were ideal. Precipitation was mostly below normal.

March: Temperatures were record high early in the month but cooled at month's end. Precipitation was much above normal over much of the state. Winter wheat was mostly in good condition. Blizzard conditions late in the month were hard on young livestock.

April: Wet soils delayed fieldwork until mid-month and then good progress was made. By month's end, soils were becoming short of moisture. Precipitation amounts were about half of normal.

May: The month started out very dry but timely rains eased soil moisture deficiencies the middle of the month. Crops and pastures were mostly in good condition. Grasshoppers were starting to be a problem.

June: Precipitation, although not generous, was enough to keep crops in generally good condition. However, by the end of the month over half of the soils were rated short of moisture.

July: General rains at mid-month soaked soils improving crop condition. The rains continued to the end of the month slowing hay and winter wheat harvest. Grasshopper infestation was mostly moderate.

August: Wet weather for most of the month slowed grain harvest to about a week behind normal. Almost all areas had above normal precipitation.

September: Dry weather returned and small grain harvest sped to a normal completion by the third week. Winter wheat seeding was mostly done by month's end, and nearly two-thirds had emerged. Livestock moved from summer pastures was about normal.

October: Late season harvest was ahead of average, and nearly complete by mid-month. By the end of the month, soil moisture was nearly two-thirds short, the result of nearly two months without much rain.

November: Soils remained dry with precipitation well below average. Winter wheat was mostly emerged and kept in fair to good condition by mild weather. Grazing remained open.

December: Topsoil and subsoil moisture supplies were short. Snowcover protection on winter wheat was lacking, but wind damage was light. There was moderate to heavy precipitation west of the Divide, but continued very dry across the Plains.

MONTANA'S RANK IN THE NATION'S AGRICULTURE

MONTANA FACTS & FIGURES

Montana's 1980 population, at 786,690, was up 13 percent from 1970. Population density, measured in people per square mile, was 5.3 in 1980--third lowest in the United States. Montana's 60.8 million acres of land in farms and ranches ranks second in the nation behind Texas.

SOURCE: Economic Indicators of the Farm Sector, State Income and Balance Sheet Statistics, USDA--ERS.

- 1/ Details may not add to total because of rounding.
- 2/ Includes operator dwelling.
- 3/ Includes forest products sales, recreational income, and other farm business-related income.
- 4/ Includes machine hire and customwork expenses; marketing, storage, and transportation expenses; and miscellaneous expenses.
- 5/ Includes contract labor expenses, hired labor wages and social security payments.

AGRICULTURAL SALES UP IN 1987

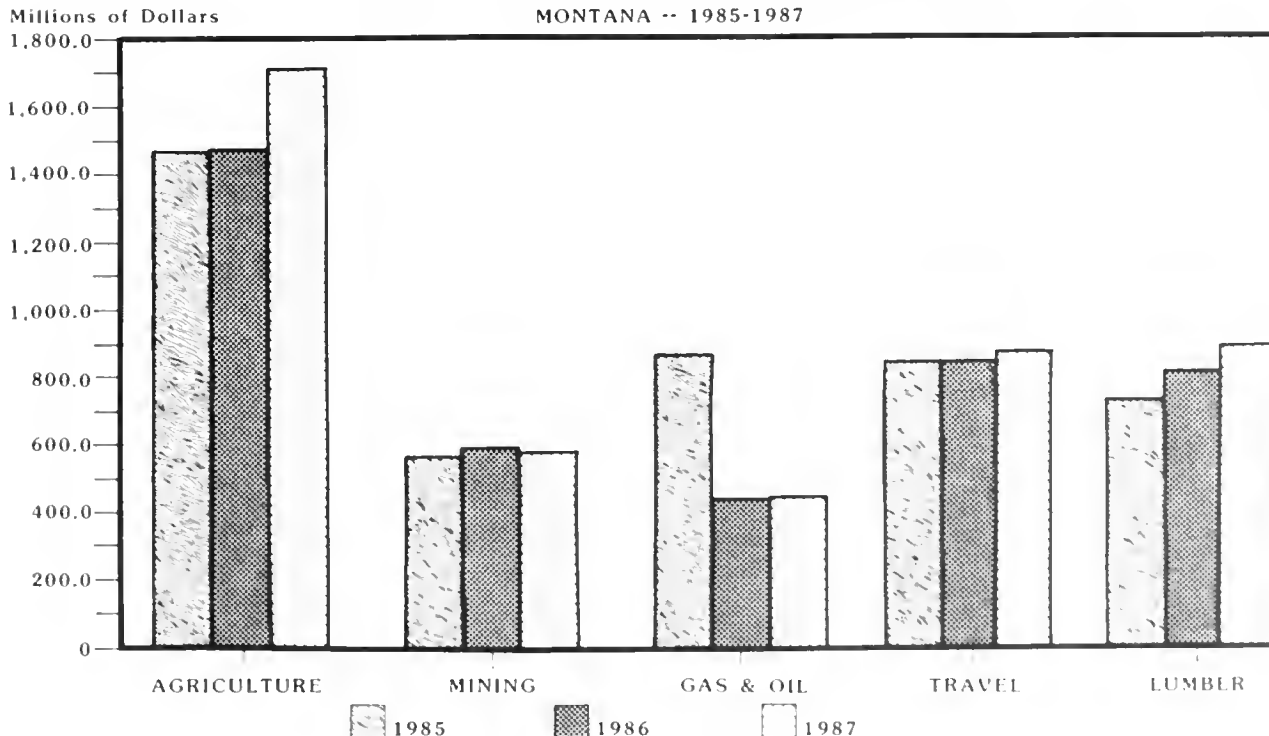

A comparison of selected Montana industries shows a sharp 16 percent increase in agricultural cash income for 1987. A closer look shows crop sales were up 25 percent, livestock sales up 17 percent while government payments increased by 2 percent.

Other basic Montana industries held their own from 1986 levels although gross receipts from gas and oil production were down 48 percent from 1985.

AGRICULTURAL EXPORTS

The value of Montana agricultural commodities exported during the year ending September 30, 1987, totaled 264.6 million, up nearly four fold from the previous fiscal year. Wheat and wheat products accounted for nearly three-fourths of the total value of exports for the state.

Value of United States agricultural commodities exported for the year ending September 30, 1987, increased 6 percent from the previous fiscal year. Wheat and wheat products accounted for about 11 percent of the total value of the nation exports.

Because of the impact of drouth on the '85 Montana wheat and barley crop, export revenues dropped sharply for the '86 fiscal year but recovered in 1987. North Dakota ranked number 1 in the export of wheat and products in '87 followed by Kansas, Washington, Oklahoma and Montana. Japan was the Number One customer if U.S. agricultural products followed by the Netherlands, Canada and South Korea.
